

## Anaconda™

**On the edge.** A forerunner in innovation, the Anaconda cure system is the next level of flash cure technology. This unit loads into the print head of any automatic textile printer and heat press flashes any color. Combining flat heater technology with the squeegee pressure provided by the press, the fibers of a garment are flattened and the ink is flashed. This makes for a more vibrant appearance for any colors printed over the base color.

# ANACONDA

## Anaconda features

- Digital temperature control.
- Solid state temperature controls.
- Roller system available for most presses.

## Construction features

- Stealth machines offer M3 23 x 31 frame support.
- Junior machines offer MZX 21 x 24 frame support.
- Teflon encased flat heater.
- Teflon platform.
- Roller quick release

November 2017

Anaconda	AF-2331
Maximum OD Screen	23" x 31"
Voltage	120V
Amperage	17A
Ship weight	50 lbs.
