SG-2331

ElectraPrint
press bracket

Speed is the answer. Designed to fit Electraprint and MasterPrinter series machines. These units speed up set-up of jobs with quick screen load and pinpoint registration. With the use of a provided art template, this backlit table is a 3-point registration fixture. The 3 set points that the screen sits against light up when the screen is in the proper position.

The ElectraPrint on-press bracket features the same 3 set points with the indicator lights. The bracket has an easy flip away design so that it stays on the press at all times. The manual press bracket is quick release with the 3 point set and heavy-duty construction.

The light table combined with the on-press bracket makes job set-up faster, simpler and more accurate.
